registered in 2022

thTJR Thailand – Bangkok factory
registered in 2023

Company Profile

TJR Precision Technology was established in December 2009, specializing in the manufacturing of high-precision key components for CNC machine tools. Our main products are ultra-high precision CNC rotary tables (4th axis and 5th axis), which are widely used in aerospace, high-tech electronics, automotive parts manufacturing, and various other machinery industries.

With our outstanding R&D capabilities, we provide high-precision, high-efficiency, and reasonably priced customized professional services to meet the needs of both domestic and international customers.

Our core values—integrity, responsibility, and innovation — drive our commitment to long-term, sustainable development and business longevity.

Guided by the spirit of "Rotating Positivity Forward", we strive to build a corporate culture rooted in optimism, accountability, and continuous progress.

There are three common transmission mechanisms of rotary table as bellow:

You can find all types of mechanism in TJR.

3 Transmission Mechanisms

A

Driven by roller gear cam
(speed: **80** rpm)

Strength:

① Almost no backlash during the clockwise / anti-clockwise rotation
② Almost no abrasion for the transmission mechanism
③ High speed

B

Driven by
worm & worm gear

Strength:

① The major and cost-effective solution
② Easy to adjust backlash after some abrasions

C-1

Driven by Super high speed
direct drive motor
(super high speed: **2000** rpm)

Strength: **a mill / turn component**

① If the moving column vertical machining center or drilling & tapping center is equipped with our table, it can make the machine work as a horizontal or vertical lathe concurrently.
② The super high speed of rotary axis: 2000 rpm.
③ Truly zero backlash during the clockwise / anti-clockwise rotation.
④ Truly zero wear for the transmission mechanism.
⑤ Long-lastiong high precision
(The actual precision depends on the selected angle encoder)

C-2

Driven by direct drive motor
(speed: **200** rpm)

Strength:

① Truly zero backlash during the clockwise / anti-clockwise rotation.
② Truly zero wear for the transmission mechanism. (No abrasion at all)
③ High speed: 200 rpm
④ Long-lastiong high precision.
(The actual precision depends on the selected angle encoder)

Instruction

How to choose a suitable TJR rotary table

Rotating Positivity Forward

❶ Workpiece material :

A : For materials like aluminum and copper, it is OK to select AR series (Pneumatic brake)
B : For materials like cast iron and steel, it is OK to select HR series (Hydraulic brake) or HI series (Hirth coupling Hydraulic brake)

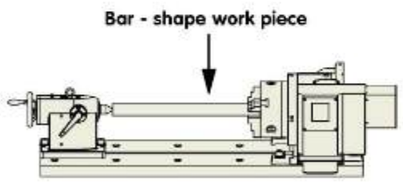
❷ Workpiece accuracy requirement :

A : For accuracy within 20 sec, select AR series (as rotary table for any angle)
B : For accuracy within 15 sec, select HR series (as rotary table for any angle)
C : For accuracy within 10 sec, the retrofitting of angle encoder can be considered; but the angle encoder costs more. If the processing only occurs at fixed angles, HI series (±5 sec can be achieved) can be considered; however, the HI series cannot be used for continuous cutting, as it only works at fixed angles of multiple of 1° or 5° (see page 38)

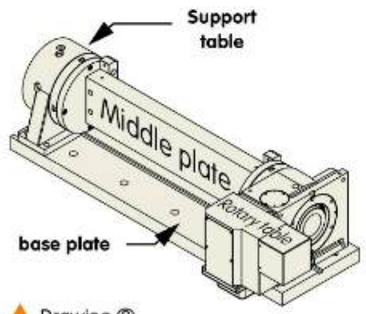
❸ Workpiece shape and size :

A : If it is in the shape of round bar, please purchase the 3-jaw chuck and the center tailstock additionally. (as below Dia.① shows) When choosing the 3-jaw chuck, note that its outer diameter should not exceed the table diameter. Please see page 76 for the grip range of the chuck.
B : If of odd shapes and more than two workpieces are processed at once (see page 75), then purchase support table additionally. (as below Dia.② shows) (For L-block, base plate and middle plate (connection plates), please have them manufactured by fixture suppliers).

※ When using middle plate, please note to limit its width to the max. table diameter.



▲ Drawing ①



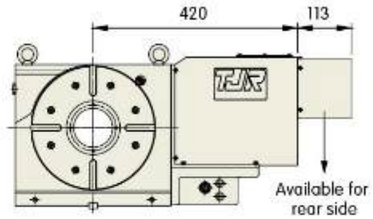
▲ Drawing ②

❹ Max. load :

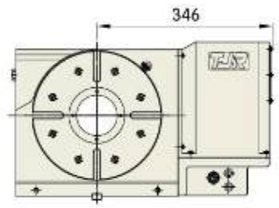
Verify if the rotary table can withstand the load of workpiece and then add up the weights of predetermined rotary table, tailstock, L-block, middle plate, base plate, workpiece and fixture to see if the total load which the machine can withstand is exceeded. If overweighed, check the material of workpiece first. If the material is aluminum alloy or other light material but you are forced to select a larger rotary table due to its too long details in shapes which require over-large radius of rotation, please feel reassured to select the rotary table of a next smaller size. Fit raiser blocks to lift the workpiece so asto accommodate the radius of rotation whereby to reduce the total weight and the cost.

❺ Y axis interference :

First, verify whether the selected rotary table interferes when it is placed on the work table of the machining center. With the Y axis of the vertical machining center moved to the origin, please measure
A : the distance between central groove of the worktable and the sheet metal of the machine's slide door (Ex: assuming 450mm remains)
B : the distance between the centerline of rotary table and the end of motor cover (excluding the wiring box) (Ex: 420mm in HR255-R as below Dia. ③ shows)
If the "B" distance is less than the "A" distance, it is certain that the rotary table will not collide with the sheet metal of the slide door. (Ex: 420mm < 450mm; thus it's ok to select HR255-R) If not, please change to sheet metal cover reduction version of TJR rotary table. (Ex: only 346mm in HR255-N as below Dia. ③-1 shows)



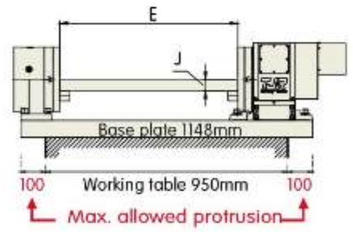
▲ Drawing ③ : HR-255R



▲ Drawing ③-1 : HR-255N

❻ Verify the available room for placing the workpiece :

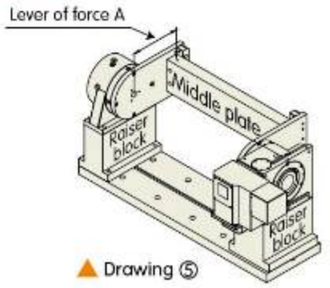
Please measure the length of working table of the machine to verify that it is not 200 mm smaller than base plate. It is the maximal allowed protrusion for the base plate of all models to stand out by 100mm on each side of the working table. For example: Assuming the length of working table of the machine is 950mm. (as below Dia. ④ shows) If HR255-N rotary table, RTH-255 support table, and middle plate are selected, then it is determined that 700 mm in "E" middle plate is available for workpiece. (see data sheet on page 75) By the same principle, it's 1148mm in "B" base plate. In this case, it's acceptable since it is only 198 mm larger than machine's working-table. As for the space "E", thickness "J" and width "H", they are advised not to exceed the set values in our specification (as data sheet on page 71).



▲ Drawing ④ :
base is bigger than working table

❼ Important notices :

When purchasing rotary table, support table, and cradle-type fixture (as below Dia. ⑤ shows), it is necessary to advise us if the arm (A) has overtaken the table radius and caused off-center process. Otherwise, the worm wheel will be worn out quickly. (The longer the arm (A) is, the more it's against common sense and normal practice) We shall not be responsible if you fail to advise so.



▲ Drawing ⑤

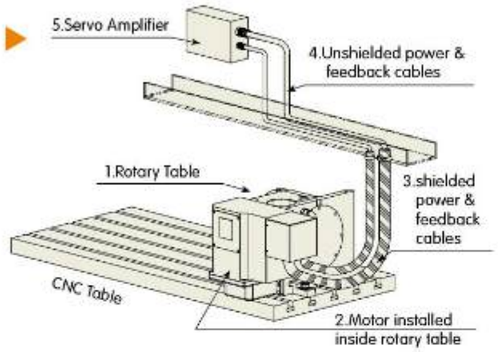
⑧ "Reserved interface for the forth axis" :

The so-called "reserved interface for the forth axis" refers to all the small hardware or PLC software necessarily reserved for the fourth axis on the machine as well as refers to five main components including ① rotary table ② 4th axis motor ③ shielded power & feedback cables ④ unshielded power & feedback cables, and ⑤ 4th axis amplifier. (as below Dia. ⑥ shows)

(A) If the machine comes with those reserved interfaces for the fourth axis, there is no problem at all to retrofit the fourth axis of the same system for four-axes simultaneous contouring.

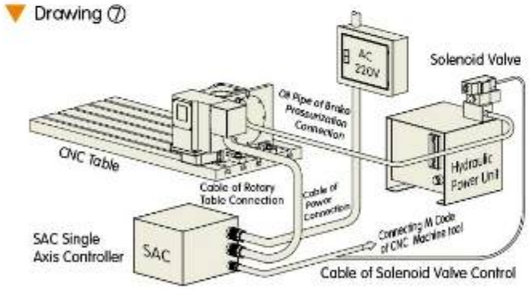
(B) If the machine does not come with those reserved interfaces for the fourth axis, the single-axis controller (SAC) we provide (as below Dia. ⑦ shows) can be used to retrofit the fourth axis. However, such single-axis controller does not interlock with any of X, Y and Z axes in the machine. In other words, the other three axes can not be moved unless the fourth-axis motion is complete.

Drawing ⑥ 5 main components of the 4th axis ▶



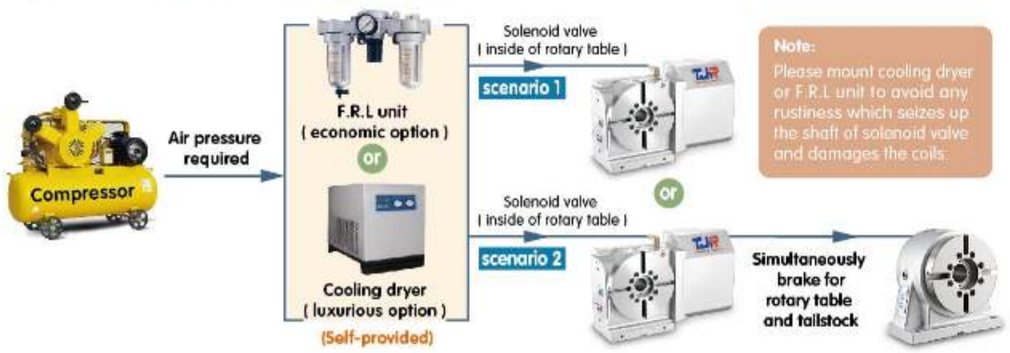
⑨ Application for single axis controller (SAC) :

▼ Drawing ⑦



★ With a reserved M Code in the machine center, TJR SAC single axis controller or AIC hydraulic controller can be easily installed, no matter which brand of control system is used.

⑩ While using AR series rotary table (pneumatic brake), please note the following matters :



Product Code

• 4 - Axis

Model Code	Table Diameter	Hydraulic Brake	Multi-Spindle Series	Motor Mounting & Cover Type

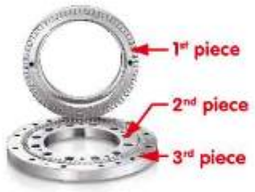
HHI Series
(Single Indexing Table for Horizontal Machining Centers)

HHI - 630x630

- HHI: Horizontal Hirth Coupling Index Table with Hydraulic Brake (Min. Indexing Angle: 1° & 5°)
- 630x630: Table Diameter

Drive by
Worm & Worm Gear



HHI Series:
Three-Piece Clutch Plate Design Advantages:

① Positioning accuracy up to ±5 arcseconds. (comparable to angle encoder precision)

② Table surface remains flat during rotation, preventing chips or coolant from entering.

Horizontal

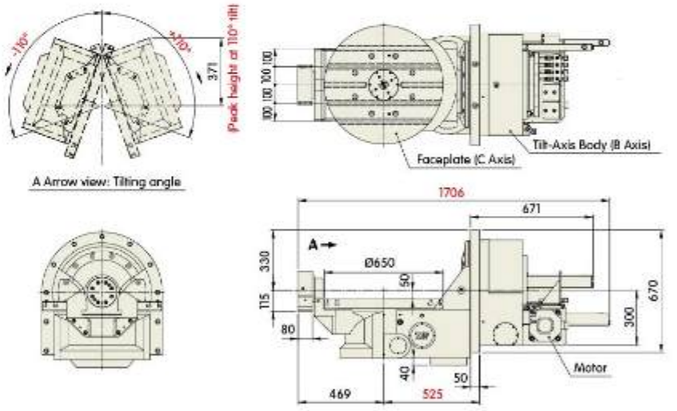
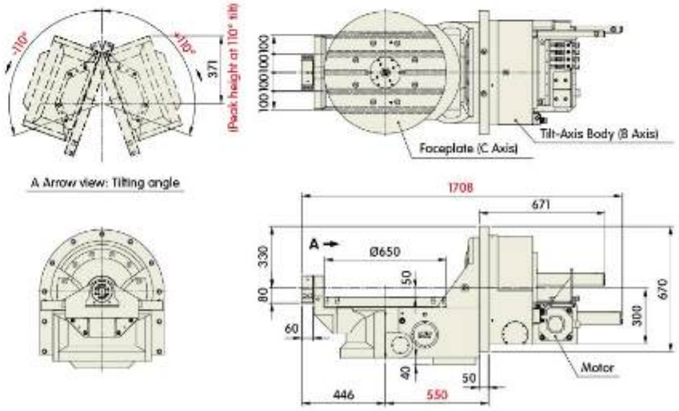
FHR-650S-525



FHR-650S-550



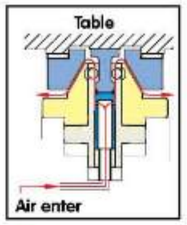
Driven by Worm & Worm Gear

CHI Series (for HMC use)

▲ **CHI Series:**
Three-Piece Clutch Plate Design Advantages:

① Positioning accuracy up to ±5 arcseconds. (comparable to angle encoder precision)

② Table surface remains flat during rotation, preventing chips or coolant from entering.



▲ **The function of cones :**
① Precise positioning
② Air blast for chip removal
③ Airtight testing

▲ **Cones:**
Powerful hydraulic clamping

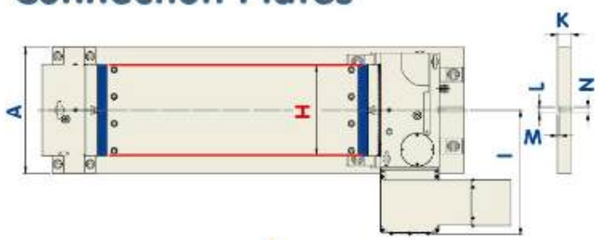
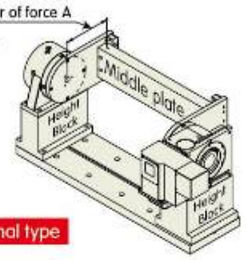
CNC Rotary Table + Support Table + Connection Plates



The plane of middle plate is at the same height as the center of rotary table (standard type)
(An exception: the plane of ARs-125 / RTA-125 middle plate is 5 mm higher than the center of rotary table)

Please keep us informed before ordering while the lever of force A exceeds the table radius



Optional type

※ Note: After the chuck grips the workpiece, if the protruding jaws cause the rotation radius to exceed the center height of the rotary table, a riser block must be installed to prevent the jaws from interfering with the machine table.

(Unit : mm)

Servo Motor Reference Table (Please use oil-proof motors)

The data in the CNC rotary table specification sheet are calculated based on FANUC αiF servo motors. If other brands of servo motors are employed, please refer to the below list in order to select the suitable non-Fanuc servo motors whose sizes and features are similar to assigned Fanuc αiF ones. But, the below list is not suitable for the rotary axis of FAR-100/160SN and FAR-170A. Please consult with TJR to confirm the model of servo motor while placing order.

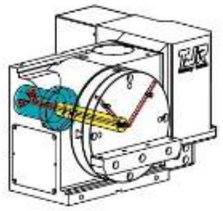
FANUC	αiF2 / 5000 αiS4 / 4000 βiS4 / 4000	αiF4 / 4000 αiS8 / 4000 βiS8 / 3000	αiF8 / 3000 αiS12 / 4000 βiS12 / 3000	αiF12 / 3000 αiS22 / 4000 βiS22 / 2000	αiF22 / 3000 αiS22 / 4000 αiS40 / 4000	αiF40 / 3000 αiS40 / 4000 αiS60 / 4000
MITSUBISHI	HF-75T / HG75T	HF-54T / HG104T	HG154S	HF-204S / HG204S	HF-354S / HG354S	HF-703S
YASKAWA	SGM7J-08A	SGM7G-09A	SGM7G-13A SGM7G-20A	SGM7G-30A	SGM7G-30A SGM7G-44A	SGM7G-44A
SIEMENS	1FK7042	1FK7060	1FK7063	1FK7083	1FK7101	1FK7103 / 1FK7105
HEIDENHAIN	QSY-96A	QSY-116C	QSY-116E QSY-130C	QSY-155B	QSY-155D	QSY-190D
SYNTEC	AM3-60	AM5-40	AM8-40 AM11-40	AM18-40	AM28-40	AM35-20(Ø35)

※ The servo motor models of the above list are actually categorized by motor sizes from the perspective of installation on the rotary tables. However, please do check the compatibility of servo motor based on the specification of NC control on the machining center.

※ Please employ higher torque motor while using connection plates and fixtures with support table.

Accessories Series

Air Hydraulic Booster Unit :
Timing for applications
1.Use hydraulic brake rotary table
2. Use hydraulic brake rotary table
+ manual tailstock



Application diagram – rotary joint
pneumatic / hydraulic distributor

When mounting pneumatic/hydraulic fixtures, please use rotary joint and disc L-blocks equipped with air/oil holes so that the air/fluid can go through the center-through hole to avoid intertwining while the rotary table spins.

Hydraulic Power Unit :
Timing for applications
1. Use hydraulic brake rotary table
+ rotary tailstock
2. Use hydraulic brake rotary table
+ rotary tailstock
+ hydraulic fixtures

Pneumatic / Hydraulic rotary joint :
(can be equipped with 2, 4, 6, 8 holes)

2 holes :
1 input ; 1 output

8 holes :
4 input ; 4 output

Internal Cable inside rotary table

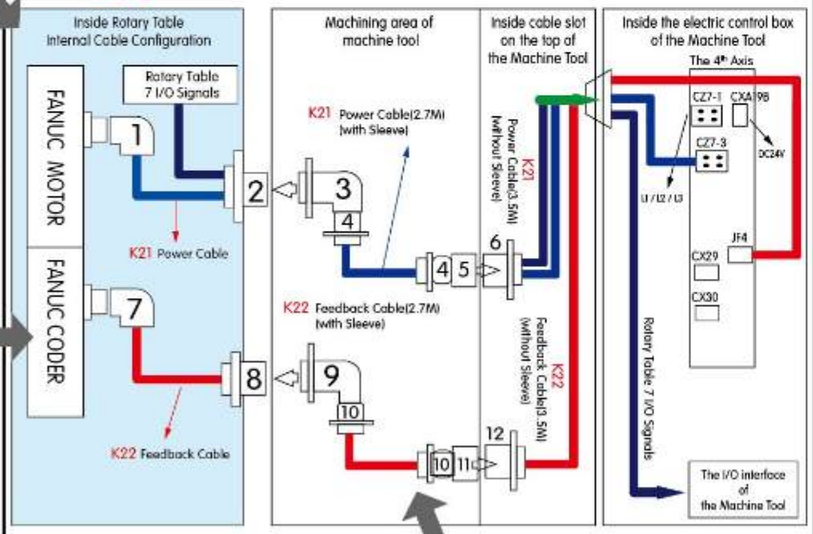
Cable assembly we provide (Standard)

Separated wiring of adaption and connection for power cable and feedback cable respectively.

※ As shown in the right diagram, internal cables include:
No. ① - ② power cable
No. ⑦ - ⑧ feedback cable
7 I/O signals for rotary table

※ TJR can also provide :
③ - ⑥ and ⑨ - ⑫ cables

TJR Power (& Signal) & Feedback Cable Diagram



Cable assembly the customer provide (Optional)

(A) No hole and cable
(B) Direct wiring of power cable and feedback cable combined into one
(C) Direct wiring of power cable and feedback cable combined into one
(D) Wiring of adaption and connection for combined power cable and feedback cable

If you prefer any one of the above-mentioned types of cable assembly, we will provide only the rotary table [7 (air brake) / 5 (oil brake)] I/O signal connector. You need to prepare the rest.

Cables located inside machining area of machine tool.

Feedback cable

Power (& signal) cable

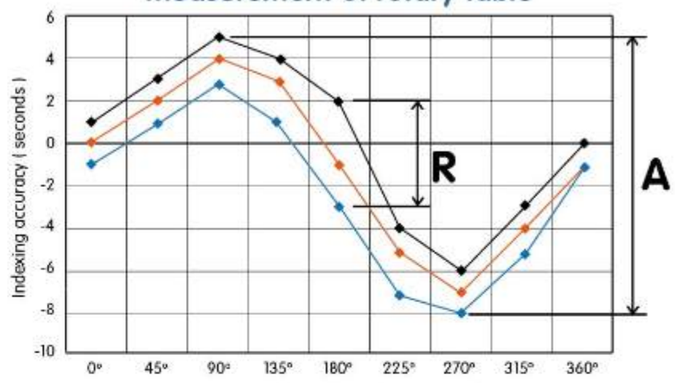
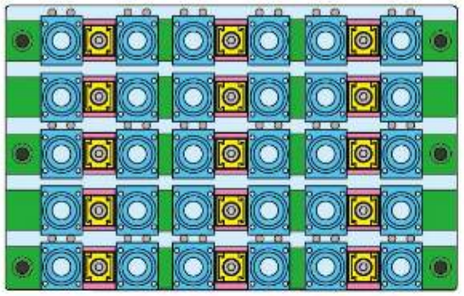
Rotary angle measurement of rotary table



The measurement of ISO 230-2

- **Indexing Precision**
  Rotate the axis in one direction and measure all the indexing values at equally divided and fixed angles (including at least 0°, 90°, 180°, 270°). Take the summary of the maximum positive difference and the maximum negative difference (absolute value) of all the measured values.

- **Repeatability**
  Repeatedly rotate the axis in one direction and measure all the indexing values at equally divided and fixed angles (including at least 0°, 90°, 180°, 270°). Get the maximum differences of all measured indexing values at each fixed angle. Then, pick the biggest values from the measured maximum differences of all angles.



Little King Kong Vise

Zero Point Clamping System

A modern solution to replace traditional T-slot tables

Zero point clamping system is the modern alternative to the conventional T-slot table: Drastically reduces the setup times and increases your machine capacity.

Make your own work-holding fixture by easily employing TJR Vise and TJR zero point clamping system on the fixture plate of 4th axis or the faceplate of 4th & 5th axes.
Holes on the zero point clamping system are used as sockets for clamping studs.
(For detailed dimensions, please contact us.)

Benefit Analysis
Benefits after the introduction of the mold change system

			Before	Afrer
Work time per week	400 hours (2400 mins)	Number of mold changes	2 hours (120 mins)	5 min
Number of mold changes	4 times	Saving time per year	460 mins	
Saving time per year	23,920 mins	NT$ 6 for one minute	NT$143,520	

Work-holding fixture can be changed quickly and accurately (across all machines).

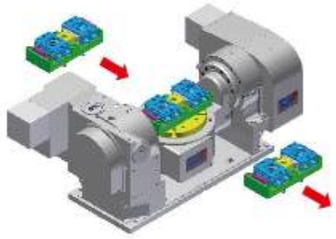
The zero point clamping system on the connection plate



The illustration of the application for the zero point clamping system on the faceplate of the 4th & 5th axes

Flow Chat of the Additional Axis Control

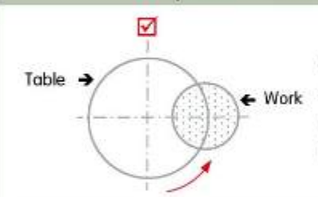
Applicable to the RC and FRC series models

For precise positioning under an unbalanced load while the mechanical brake clamps, it's recommended to keep the servo enable **ON**. However, if the electric current consistently flows at more than 70%, please turn **OFF** the servo enable.

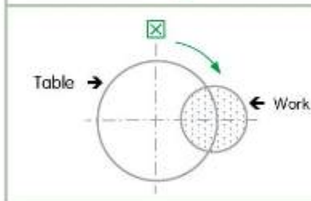
Please specify brake control specifications when ordering, including:
- Type of solenoid valve (DC24V, AC110V, or AC220V)
- Motion of solenoid valve for clamp (ON: Camp or OFF: Clamp)

Guideline of Unclamp timer:
Approx. 0.5 sec. But, this duration may vary depending on the type of brake and the layout of the piping.

Please move the unbalanced load all the way up to the destination position.



It is recommended to move the unbalanced object upward through a rotating motion to reach the target position.



It is not recommended to move the unbalanced object downward in a rotating motion to the target position.

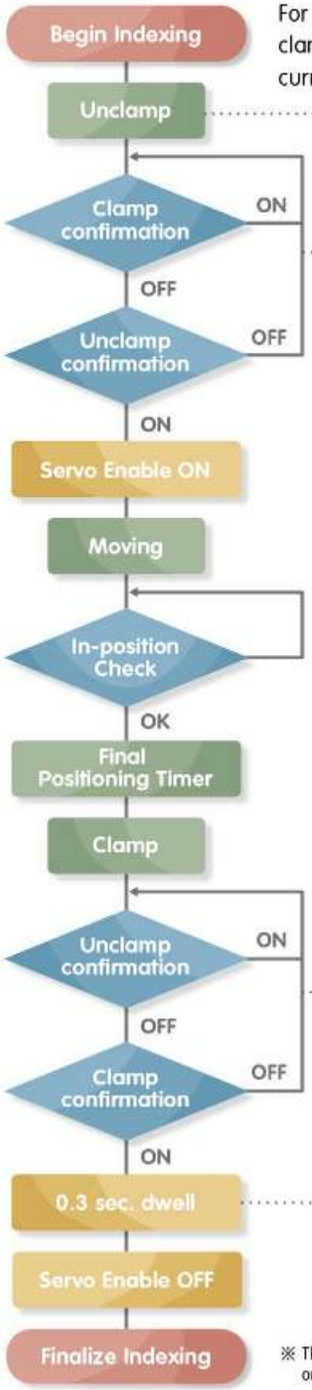
Guideline of Clamp timer:
Approx. 0.3 sec. But, this duration may vary depending on the type of brake and the layout of the piping.

For both hydraulic clamping systems and clamping systems that use an air-hydraulic booster, a dwell time of 0.3 seconds after clamp confirmation is necessary. The timer value can be set as a parameter during configuration.

※ The above dwell time is our recommended time, but the actual required dwell time may vary depending on different operating conditions and environments of rotary table.

Flow Chat of the Additional Axis Control

Applicable to the AR, HR, HI, FAR, and FHR series



For precise positioning under an unbalanced load while the mechanical brake clamps, it's recommended to keep the servo enable **ON**. However, if the electric current consistently flows at more than 70%, please turn **OFF** the servo enable.

Please specify brake control specifications when ordering, including:
